

JediSoft IRISsync™

For InterSystems IRIS:

Synchronize configurations between multiple IRIS servers

GUI for system administration

Highly customizable

Server Families

Set up configurations on multiple servers at once

Compatible with all IRIS versions

Under support

Small footprint

Audit log saved on IRIS database

...It has everything, including the kitchen sink!

JEDISOFT

Sync Smarter, Not Harder with JediSoft IRISsync™

Automatic Discovery & Comparison

IRISsync scans every server, highlights differences instantly.

Visual Configuration Differences Viewer

See exactly what's changed, down to the individual object property.

Eliminate Manual Configuration Errors

Reduce human-introduced misconfigurations by up to 100%.

Save Time & Resources

Spend minutes, not hours, verifying your IRIS server farm.

Increase Uptime

Consistent configurations mean fewer surprises in production.

Centralized Control

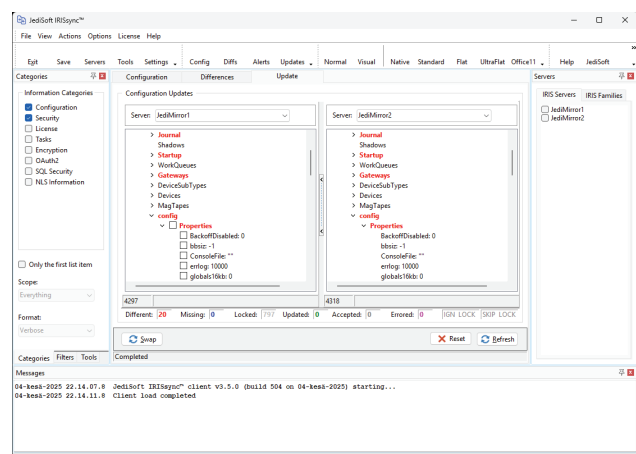

Manage all your IRIS instances from a single dashboard.

Compare configuration differences between 2, 3 or 4 IRIS instances and identify discrepancies:

- Configuration information
- System security settings
- License information
- System and user tasks
- OAuth2 authentication settings
- SQL table privileges
- User accounts
- Scheduled tasks
- Web applications
- SSL configuration

How it works – Step-By-Step

- Connect to your servers
- Collect data and compare
- Review and approve
- Synchronize properties
